IPTI is proud to present the 2006 International Offshore Pipeline Forum (IOPF). This two-day forum was developed by your industry peers to meet the changing technological and educational needs of the industry.

The theme for the forum is “Building Deepwater Pipeline Infrastructure.” During the course of the forum industry leaders will present technical papers and presentations on flow lines, risers, export pipeline, regulatory issues, installations and operations/integrity/maintenance/repair. Technology investigation works best in an intimate setting, therefore the quality of the forum will be assured by limiting attendance. This allows the programming committee to create a more personalized experience for you.
